

A hand-drawn diagram of a square divided into two horizontal sections by a single line. The top section contains the number '10' and the bottom section also contains the number '10'.

محمد بن ابراهيم بن محمد بن عبد الله بن محمد بن عبد الله

- Line 1 $\rightarrow (0, 1), (-1, 0)$

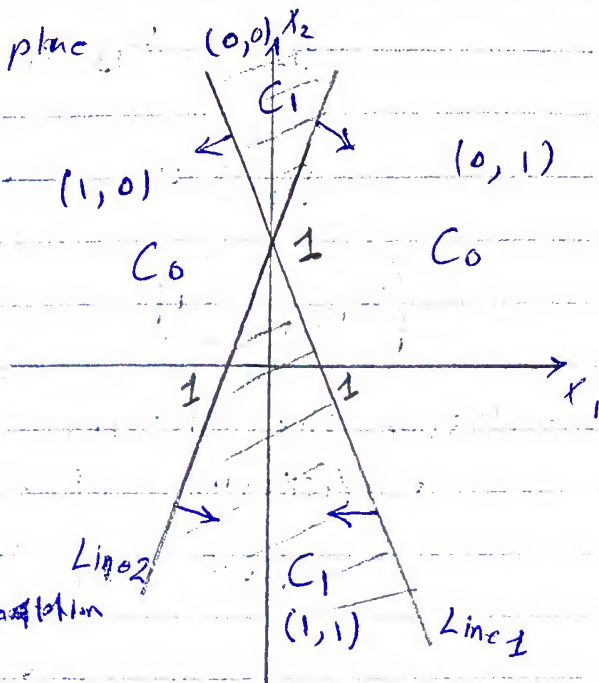

$$\frac{X_1 - 0}{X_2 - 1} = \frac{1 - 0}{0 - 1}$$

$$-X_1 = X_2 - 1$$

$$X_1 + X_2 - 1 = 0$$

↳ negative → Changing the organization

$$-X_1 - X_2 + 1 = 0 \quad \text{Line 1}$$

- Line 2 $\rightarrow (0, 1), (-1, 0)$

$$\frac{x_1 - 0}{x_2 - 1} = \frac{0 - (-1)}{1 - 0}$$

$$x_2 - 1 = x_1$$

$$x_1 - x_2 + 1 = 0$$

testing the Orientation using $(0, 0)$

↳ positive

$$x_1 - x_2 + 1 = 0 \quad \text{Line 2}$$

- we have two separation lines

- So we need ~~for~~ to two neurons in the hidden Layer

- Using the neuron N_3 to represent the Line 1

* Activation of N_3

$$y_3 = w_{13} x_1 + w_{23} x_2 + w_{03}$$

$$y_3 = 0 \rightarrow -x_1 - x_2 + 1 = 0$$

$$w_{13} = -1$$

$$w_{23} = -1$$

$$w_{03} = 1$$

- Using the neuron N_4 to represent the Line 2

* Activation of N_4

$$y_4 = w_{14} x_1 + w_{24} x_2 + w_{04}$$

$$y_4 = 0 \rightarrow x_1 - x_2 + 1 = 0$$

$$w_{14} = 1$$

$$w_{24} = -1$$

$$w_{04} = 1$$

- to provide the required classification with the chosen orientation, we need to perform XNOR operation on the output of neurons N_3, N_4

- We Design AND Gate using neuron N_5

- Activation of N_5

$$y_5 = w_{35} f(y_3) + w_{45} f(y_4) + w_{05}$$

$f(y_3)$	$f(y_4)$	$f(y_3) \cdot f(y_4)$	S
0	0	0	1
0	1	0	0
1	0	0	0
1	1	1	1

- for $f(y_3)=0, f(y_4)=0$

$$y_5 = \boxed{w_{05} < 0}$$

- for $f(y_3)=0, f(y_4)=1$

$$y_5 = \boxed{w_{45} + w_{05} < 0}$$

- for $f(y_3)=1, f(y_4)=0$

$$y_5 = \boxed{w_{35} + w_{05} < 0}$$

- for $f(y_3)=1, f(y_4)=1$

$$y_5 = \boxed{w_{35} + w_{45} + w_{05} > 0}$$

We Choosing

$$\rightarrow \boxed{y_5 = f(y_3) + f(y_4) - 1.5}$$

$$\boxed{w_{35} = 1}$$

$$\boxed{w_{45} = 1}$$

$$\boxed{w_{05} = -0.5}$$

The Activation of neuron N6

$$y_6 = w_{36} f(y_3) + w_{46} f(y_4) + w_{56} f(y_5) + w_{06}$$

\rightarrow for $f(y_3)=0, f(y_4)=0 \rightarrow f(y_5)=0 \rightarrow s=1$

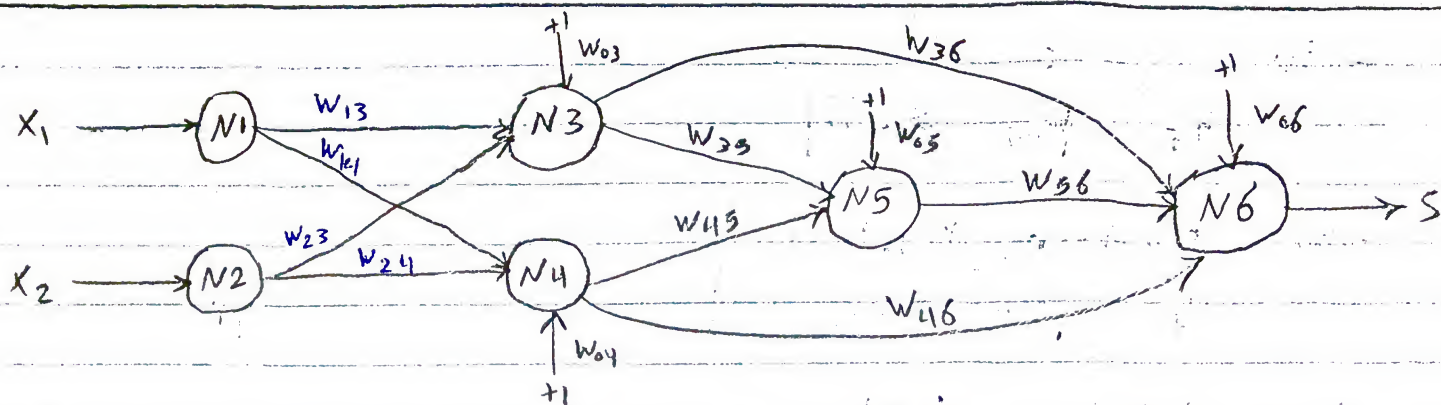

$$y_6 = \boxed{w_{06} > 0}$$

\rightarrow for $f(y_3)=0, f(y_4)=1 \rightarrow f(y_5)=0 \rightarrow s=0$

$$y_6 = \boxed{w_{46} + w_{06} < 0}$$

\rightarrow for $f(y_3)=1, f(y_4)=0 \rightarrow f(y_5)=0 \rightarrow s=0$

$$y_6 = \boxed{w_{36} + w_{06} < 0}$$

Using Binary threshold Function for hidden and output neurons

→ For $f(y_3) = 1$, $f(y_4) = 1 \rightarrow f(y_5) = 1 \rightarrow S = 1$

$$y_6 = w_{36} + w_{46} + w_{56} + w_{06} > 0$$

We Choose $\rightarrow y_6 = -1.5 f(y_3) - 1.5 f(y_4) + 2.5 f(y_5) + 1$

$$w_{06} = 1$$

$$w_{36} = -1.5$$

$$w_{46} = -1.5$$

$$w_{56} = 2.5$$

X_1	X_2	y_3	$f(y_3)$	y_4	$f(y_4)$	y_5	$f(y_5)$	y_6	$S = f(y_6)$	Classification
0	2	-1	0	-1	0	-1.5	0	1	1	C_1
0	-2	3	1	3	1	0.5	1	0.5	1	C_1
2	1	-2	0	2	1	-0.5	0	-0.5	0	C_0
-3	0	4	1	-2	0	-0.5	0	-0.5	0	C_0

- No, we can't classify (1, 2) → because it lays on the Line 2

$$X_1 - X_2 + 1 = 1 - 2 + 1 = 0$$
